Group: El Cuatro

Steven Rojas, Scott Devereaux,

Yengkong Sayaovong, Scott Savage

## Group Lab 1 - Application Deployment

We started by each member choosing a unique application. Steven chose, Notepad ++, Scott D., initially chose Paint.Net, Yenkong went with Google chrome, and Scott S. went with Firefox. Steven volunteered to create a device and user collection for the group.

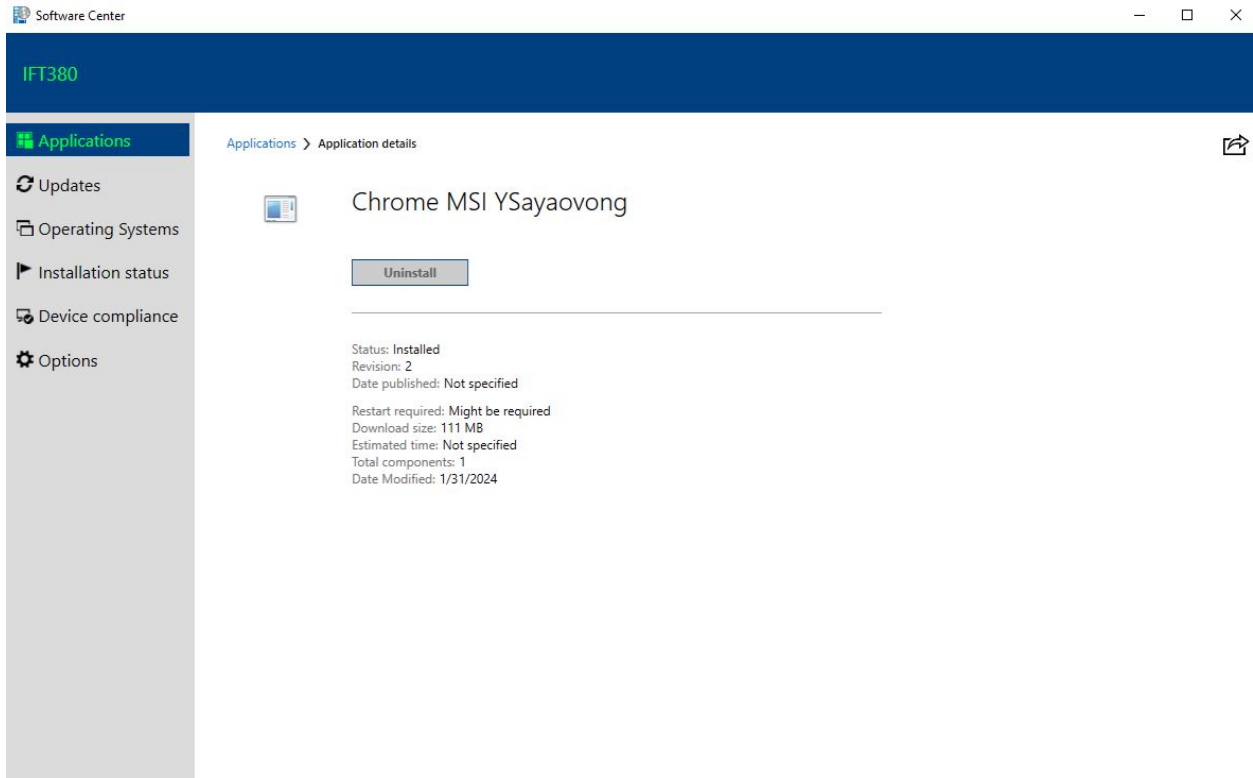

Scott D. switched for Paint.Net to 7-Zip and we all created our applications as follows:

Team El Cuatro 5 items					
Search current node + subfolders					
Icon	Name	Deployment Types	Deployments	Status	
	7-Zip by SDevereaux	1	1	Active	
	Google Chrome-copy	1	2	Active	
	Mozilla Firefox SSavage	1	1	Active	
	Notepad++ SRojas	1	1	Active	
	Paint.Net by SDevereaux	1	2	Active	

  

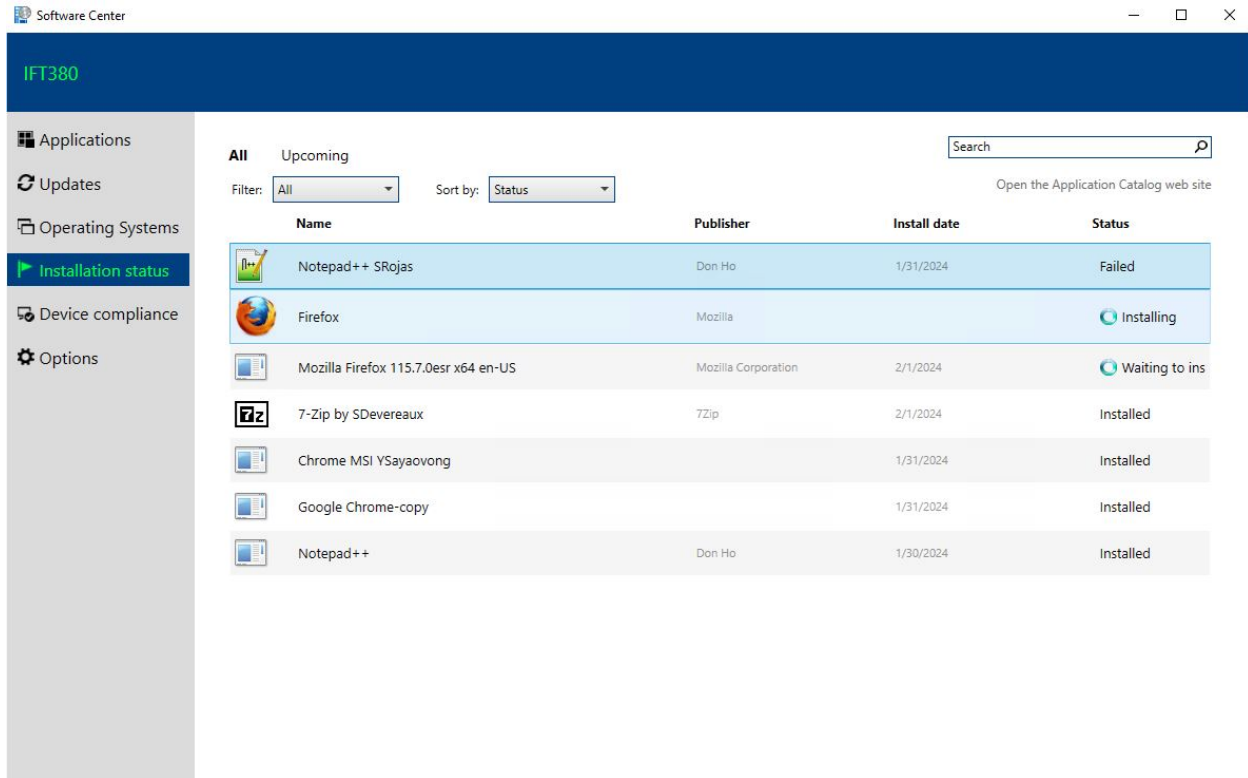

7-Zip by SDevereaux						
Icon	Priority	Name	Dependencies	Technology Title	Superseded	Content ID
	1	7-Zip 23.01 (x64 edition) - Windows Installer...	No	Windows Installer...	No	Content_7...

We then deployed our software with Firefox and chrome set to required and 7-Zip and Notepad ++ set to available. We simulated the deployments as well before installing them. We reset our Apporto environments and the required install of firefox and chrome went through. Below is the what software center showed for every after the required silent install:

Firefox installed on everyone's machines but gets a failed detection error. My best guess is it couldn't be detected after the install to verify even though it was installed and operational. It was listed as an error or a spinning wheel under status but the app worked the entire time.

Above shows the Firefox not registering and Chrome, Notepad++ and 7 zip fully installed below. 7-Zip, Notepad++ were deployed as available and FireFox ws redeployed as “available” too to fix the bug but yielded the same results. After installing and testing, it seems all settings were correct and the apps were fully functional.

## Summary:

Steven Rojas - Notepad ++ App and deployment via script, testing and Group/ User Collection Creation

Scott Deveraux - 7-zip App and deployment, testing

Yengkong Sayaovong - Chrome App and deployment, testing

Scott Savage - Firefox app and deployment, testing , compiled lab report
